ABSTRACT

This report contains a brief summary of the evaluation of the Summer At-Home Reading Program, which was designed to improve the reading skills of low achieving elementary school children and to involve parents actively in their children's reading instruction. Among the positive findings reported for the program are that parents who participated were generally enthusiastic about the program and wanted to see it continued, were satisfied with the training they received, and did not report any major problems in finding assistance when necessary. Among the negative findings reported are: the program had no discernable impact on reading achievement as measured by standardized tests, many students were assigned materials that were either above or below their current level of reading achievement, and first grade students were "overselected" for the program. The major portion of the report consists of appendixes that contain data gathering forms, tests, and other materials used in the program evaluation. (FL)

TABLE OF CONTENTS

FINAL REPORT

Project Title: 1980 Summer At-Home Reading Program

Contact Person: David Welsh, David Doss

Major Positive Findings:

1. The parents who participated in the program were generally very enthusiastic about it and would like to see it or similar programs continued.

2. Most participating parents were satisfied with the training they received from Title I staff.

3. Parents did not report any major problems in finding assistance when necessary.

Major Findings Requiring Action:

1. At-Home participants did not make larger achievement gains than their matched controls.

2. The program's participation objective was not met.

3. A large number of participants appeared to be assigned At-Home session levels which were either above or below their current level of reading achievement.

4. First-grade students may have been over-selected for participation in the program, i.e., on the whole, first graders were not as far behind their peers as were students at other grades.

Program Description:

The At-Home Program is designed to improve the reading skills of low-achieving elementary school children. Participants receive one of eight different reading kits (called "sessions") designed to correspond to their current reading ability. Sessions range in difficulty from prekindergarten to sixth-grade reading levels. Each session consists of 10 lessons which are to be completed at home over a ten-week period. The lower level sessions (A, A/B, B, C, and D) provide opportunities for parents to play an active role in their child's reading instruction; the higher level sessions (X, Y, and Z) allow for more independent work on the part of the child.

Completed lessons are sent to the At-Home headquarters in Maryland, where they are corrected by certified teachers and then returned to the students. Additional materials, designed for enrichment or remediation, may be included with the corrected lessons.

All participants receive a certificate; those who complete all ten lessons also receive an At-Home T-shirt. A special [illegible], held in mid-August, honored those students whose performance in the program was outstanding.

The At-Home Program has been used previously during [illegible]rs of 1977, 1978, and 1979. In addition, Title I used the [illegible] as an instructional support component during the 1977-78 school [illegible]. Based on consistently strong support for the program from participating parents, principals, and Title I teachers, a decision was made to continue the program during the summer of 1980. The program was implemented on the following Title I elementary campuses: Allison, Brentwood, Brown, Dawson, Norman, Oak Springs, Pecan Springs, Pleasant Hill, Ridgetop, Rosedale, Rosewood, and Sims.

Families with a child eligible for Title I services, and whom the school's Title I or Title I Migrant reading teacher considered likely to complete the program, were invited to participate. Because approximately 100 kits were left after those families given the opportunity to participate actually registered, the program coordinator offered enrollment in a second ten-week session to a group of participating families. This second session was held subsequent to the first, from August 11 to September 28, 1980.

Evaluation Summary:

The evaluation was conceptualized in the original design (ORE publication number 79.54) as focusing on three general issues. The first issue involved the degree of participation on the part of the involved families, as well as a general description of the way in which participating families used the program materials. A second general issue centered on the reading achievement gains of At-Home students relative to a group of control students. The third general area of interest was whether achievement gains could be related to certain implementation characteristics.

What follows is a brief summary of the evaluation findings. These findings have been organized around the major question to which they are relevant. More complete information about the procedures used to collect and analyze these data can be found in the technical appendices to this report.

HOW DID PARENTS FEEL ABOUT THE PROGRAM?

Participating parents' feelings about the At-Home Program were assessed with a questionnaire developed by ORE (see Appendix B). Parents responded to several multiple-choice items which were designed to tap various aspects of the program itself as well as its administration. Respondents were also invited to write additional comments on the back of the questionnaire.

Responses to the multiple-choice portion of the questionnaire were quite consistent. Most parents were satisfied with the parent training they received, and very few reported any problems in finding assistance when necessary.

The majority of the parents thought the lesson instructions were easy to understand, although levels A, B, and D seemed to be somewhat harder for parents to understand than the other levels. Most parents reported that their children enjoyed doing the lessons.

Responses to the open-ended item were also quite positive. That is, most of the respondents indicated they enjoyed the program and many expressed a wish for its continuation in the future. Different parents tended to emphasize different aspects of the program as particularly important to them. For example, several stated they liked the opportunity to interact with their child and that the experience gave them a better appreciation of the child's strengths and weaknesses. Several thought the program was beneficial in terms of maintaining the child's academic skills during the summer vacation, and many noted that their children enjoyed working on the lessons.

However, parents' written comments were not uniformly positive. A few respondents thought the lessons were too easy for their child, while an equal number thought the lessons were too hard. Several parents wanted to see math lessons in addition to the reading lessons. Two parents said they were unable to get help when they needed it, and one wished that the lessons took longer than 15-20 minutes to complete. One parent was disappointed that her child received the same level the child worked on last summer. Three parents felt the program started too early and that it should not start before school ends. Four parents commented on problems they had communicating with program headquarters in Maryland (e.g., being told that only seven lessons were received when all ten had been sent).

To summarize, the parents who participated in the program were generally very enthusiastic about it, many of them expressing a desire for its continuation.

HOW CAN WE DESCRIBE PARTICIPATION IN THE PROGRAM?

Information relevant to this question was derived from two sources. One source was the Parent Questionnaire (Appendix B), which included questions about how the family worked on the lessons. The second source of information was the student profiles maintained by At-Home headquarters in Maryland (Appendix C). These profiles included the number of lessons completed and mistakes made by each participant.

Responses to the Parent Questionnaire indicated that the mother was most frequently the family member who helped the child. Most parents reported that their children did not need a lot of help in completing the lessons, and most lessons were completed in one day. It was initially hoped that information about the way the family worked on the lessons could be related to subsequent achievement gains. Unfortunately, the lack of variability in parents' responses meant that such relationships could not be meaningfully evaluated.

Figure 1 displays the average number of completed lessons and the average number of errors per completed lesson by session level. According to these data (supplied by program headquarters in Maryland), the total average number of completed lessons was 7.7. This represents a lesson completion rate of 77%, somewhat lower than the program's stated participation objective ("participants will complete 80% of the At-Home lessons").

Figure 1 also suggests that as the difficulty level of the sessions increases, the number of completed lessons tends to decrease and the number of errors tends to increase.

Session Level	Number of Participants	Average Number of Completed Lessons	Average Number of Errors[a]
A	48	7.98	.50
A/B	68	7.93	.49
B	74	7.74	.59
C	35	7.71	1.04
D	38	7.24	1.04
X	27	8.26	1.57
Y	14	6.14	2.83
Z	3	5.00	1.67
TOTAL	307	7.70	.86

[a]Per completed lesson.

Figure 1. MEAN NUMBER OF COMPLETED LESSONS AND ERRORS PER COMPLETED LESSON BY AT-HOME SESSION LEVEL. First ten-week session.

Another issue of interest with respect to program participation was the extent to which students were assigned session levels which corresponded to their reading ability as assessed by the Iowa Tests of Basic Skills (ITBS).

Appropriateness		AT-Home Session Level A/B	B	C	D	X-Z
Too Hard	n	-	3	10	12	22
	%	-	3	29	32	50
Appropriate	n	15	43	17	13	19
	%	23	61	49	34	43
Too Easy	n	49	24	8	13	3
	%	77	34	22	34	7

Figure 2. APPROPRIATENESS OF MATH BETWEEN SESSION LEVEL AND ENTERING ACHIEVEMENT LEVEL. Percents refer to column percents.

Figure 2 displays the results of a classification of participants as appropriately or inappropriately assigned to specific session levels on the basis of spring, 1980, ITBS reading scores. Inspection of this figure reveals a high proportion of level A/B participants for whom that level was apparently too easy, as well as a large number of levels X-Z participants for whom those levels were apparently too difficult.

To summarize, the typical family's participation in the At-Home Program may be broadly described as a mother working with her child on a brief lesson, which is completed in one sitting and with which the student seems to need little help. If the student is working on one of the X-Z levels, he will possibly complete fewer lessons and make more errors than if he is working on one of the other levels. A student assigned an X-Z level may be working with material which is too difficult; a student assigned the A/B level is probably working on material with a difficulty level below her reading ability.

WAS READING ACHIEVEMENT INFLUENCED BY PARTICIPATION IN THE PROGRAM?

This question was of major importance in the program evaluation. Consequently, much effort was directed toward selecting a carefully matched group of comparison students, administering and scoring the posttests, and analyzing the resulting data. The details of this effort are described in full in Appendices D and E.

The Metropolitan Readiness Tests was used as the posttest for kindergarten participants and controls. Figure 3 shows that there was no measurable effect of the program at the kindergarten level. Figures 4 through 6 show the results of the analyses for grades 1-6 which tested for equal gains between At-Home and control students on the Word Analysis, Vocabulary, and Reading Comprehension subscales of the ITBS. These figures reveal no significant effect of At-Home participation in terms of ITBS grade equivalent scores.

Additional analyses, which looked for program effects in terms of specific skills rather than overall grade equivalents, also yielded negative results. Moreover, achievement gains were not related to the number of lessons completed, even when the effects of an additional ten lessons were evaluated. Nor did students who had participated in the program in previous years make larger gains than those participating for the first time.

One interesting observation drawn from Figures 4-6 is that the program's first graders had, on all three tests, average achievement levels virtually identical to the achievement levels of the second graders. This suggests that the first graders may have been "over-selected" for program participation. That is, they may have been enrolled in the program less selectively than the other students.

To summarize, the program apparently had no discernible impact on reading achievement as measured by standardized test scores.

Measures	N	Mean Raw Score		Equal Slopes			Equal Gains		
		Pretest[a]	Posttest	df	F	p	df	F	p
Auditory Skills									
At-Home	24	37.88	17.42	1,44	<1	.81	1,45	<1	.84
Control	24	38.50	17.42						
Visual Skills									
At-Home	24	37.88	15.83	1,44	1.07	.31	1,45	<1	.45
Control	24	38.50	17.46						
Language Arts Skills									
At-Home	24	37.88	10.67		[b]		1,45	<1	.35
Control	24	38.50	10.75						
Prereading Composite									
At-Home	24	37.88	44.46	1,44	<1	.73	1,45	<1	.92
Control	24	38.50	45.63						

[a] Pretest is total raw score on the Boehm Test of Basic Concepts (Spring, 1980, administration).
[b] The amount of variance accounted for by the two models was virtually identical. Therefore, this test could not be meaningfully evaluated.

Figure 6. COMPARISON BY GRADE OF READING COMPREHENSION GAINS MADE BY AT-HOME AND CONTROL STUDENTS. Ten-week participants only.

Discussion and Recommendations:

ORE has done outcome evaluations of Title I and Migrant summer school programs for several years. The results have consistently failed to yield evidence of an impact of these programs on achievement scores. Moreover, these programs have been much more extensive in scope and duration than the At-Home Reading Program. For example, a summer school might meet all morning five days a week for six weeks and provide about 90 hours of instruction. Therefore, the failure of the present evaluation to detect achievement effects in a program providing 10-20 hours of instruction is not surprising.

However, the failure of the program to meet its achievement objective should not overshadow the high degree of enthusiasm on the part of participating families. Most of the parents seemed genuinely excited about having an opportunity to become actively involved in their children's schooling, and many appeared receptive to future efforts along these lines.

The recent work by Irving Lazar and Richard Darlington (Lazar and Darlington, 1978) may have some relevance to this evaluation. Lazar and Darlington did a follow-up study of former participants in preschool education programs. They found that the programs had a positive long-term impact on the students when compared with nonparticipants. Interestingly enough, however, they found that the impact was not related to such program characteristics as the child's age upon entry into the program, the length of the program (in months or hours per year), the degree of parental participation, or a number of other variables. In a presentation in Austin, Lazar suggested that somehow the effects the programs had on parents may have been the factor responsible for the positive outcomes. The parents may have become more involved in the education of their children than they would have otherwise. There is some evidence from the study that they had higher expectations for their children than did the parents of nonparticipants.

In reading the written comments added by the parents of At-Home participants, it seems that many parents probably liked the program because

a. it gave them the school's permission to work with their children, and
b. it provided them with specific activities to do with them.

It is possible that as a result of participation in the program, At-Home parents may feel freer and more confident about monitoring the educational progress of their children. Such changes in parental attitude could have a long-range payoff for the program. In order to test that possibility, 1980 At-Home participants and controls will be followed through the 1980-81 and 1981-82 school years to see if such long-term benefits can be found.

Based on the findings presented in this report, the following recommendations are made:

- If reading achievement gains are an expected outcome of this program, the number of lessons per week should be increased. However, five lessons a week for 12 weeks would only provide 60 hours of instruction. This amount might not be sufficient to improve achievement.

- Future programs of this nature should closely examine the way in which participants are given materials of varying difficulty levels, in order to produce a closer match between those materials and participants' abilities.

- Parents seem to enjoy this kind of involvement in their children's education and may be responsive to more extensive efforts along these lines (e.g., increasing the length and/or number of lessons).

- It might be desirable to incorporate the use of parental involvement activities such as the At-Home Reading Program into the regular school curriculum (e.g., structured homework assignments designed to involve the student's parents).

- Future evaluations of this type of program should include, if possible, outcome measures other than strictly academic ones (e.g., degree and type of parental involvement in the school during and following program participation).

1980 Summer At-Home Reading Program

Appendix A

AT-HOME OBSERVATION FORM

80.61

Instrument Description: At-Home Observation Form

Brief description of the instrument:

A three-page form used to guide home observations. The form lists variables to watch for during the observation, questions to ask the parent(s) following the observation, and contains spaces for describing the room arrangement, sequence of events, etc.

To whom was the instrument administered?

Teachers at several of the project schools suggested names of families who would be willing to allow an observer into their homes. Phone contacts resulted in five families who agreed to the observations.

How many times was the instrument administered?

Six times (one family had two children observed).

When was the instrument administered?

June 19, 20, 27, and July 1, 1980.

Who administered the instrument?

An observer hired by ORE specifically for this purpose.

What training did the administrator have?

General training in observation practices.

Was the instrument administered under standardized conditions?

No.

Were there problems with the instrument or the adminstration that might affect the validity of the results?

The families who were willing to allow observations may not have been representative of the entire group of participating families.

Who developed the instrument?

An evaluation intern, with the consultative assistance of the Title I Migrant evaluator.

What reliability and validity data are available for the instrument?

None.

Are there norm data available for interpreting the results?

No.

AT-HOME OBSERVATION FORM

Purpose

The At-Home Observation Form provided information used in the development of the Parent Questionnaire. As such, it was not directly related to any decision or evaluation questions. It was hoped that observations of parents working with their children at home would result in the isolation of several dimensions which could differentiate familes in terms of how they used the At-Home materials. The form is reproduced in Attachment A-1.

Procedure

The Title I reading teachers at several of the participating schools were asked to suggest families who might be willing to allow an observer into their homes while the family conducted an At-Home lesson. Working from this list, the observer contacted families by phone and arranged appointments.

Prior to the observations, the families were told to simply conduct the lesson as they normally would. Following the lesson, the observer asked them the questions found on page three of the form. After each observation, the observer returned to ORE, where she was debriefed by several members of the evaluation staff.

Results

Six observations (in five different families) were conducted. Three of the observations were of mothers working with daughters; one involved a mother and son; two involved older sisters helping younger sisters. One observation was a level X lesson; three were level D lessons; two were level B lessons.

For the most part, the parents seemed to have little trouble using the materials, although one mother did say that sometimes she wished the instructions accompanying the lessons were easier to understand. This mother reported going to a neighbor to get clarification on one set of instructions. Most of the children moved through their lessons quite rapidly and with little apparent difficulty, although one child did seem to have some trouble using a dictionary.

There was some variability in terms of the amount of parental involvement in the lesson. In fact, one mother simply helped her child get the materials ready, and then left the room for the duration of the lesson. This was the same child who had trouble using the dictionary (the child

was working on level X). This mother was the only one to give a negative evaluation of the program, claiming that she was surprised by the fact that it was a correspondence course and also stating that she could not see the usefulness of the lessons themselves. However, the observer felt that these comments were largely a function of this mother's general negative attitude (e.g., the mother also criticized desegregation, Title I regulations, her child's motivational level, etc.).

With the one exception described above, the mothers were uniformly positive about the program. One stated that the time spent working with her daughter was a special time for them both. Several indicated an interest in additional lessons, and one felt that the program had made a definite improvement in her daughter's reading ability. Two mothers felt the lessons may have been a little too easy for their daughters (one of these tried to get a higher level for her daughter, but was told by the teacher she contacted that it was too late to change). Two parents commented on the slowness with which they received corrected lessons from Maryland.

AT-HOME OBSERVATION

FAMILY: _____ DATE: _____

CHILD'S NAME: _____ LESSON STARTED: _____

CHILD'S BIRTHDATE: _____ LESSON ENDED: _____

CHILD'S LAST GRADE: _____ LESSON NUMBER: _____

I. Describe the general setting in which the lesson was conducted. Include the number of people present, the room in which the lesson was held, which parent(s) helped, any distractions or interruptions, etc.

II. Draw a diagram representing the relative positions of all the people in the room (including yourself).

III. While watching the lesson, try to keep in mind the following questions, and try to answer each one.

a. What was the general pace of the lesson (slow, fast, moderate?)

b. Did the parents seem to have any trouble using the materials?

c. Did the parents and child seem to enjoy the lesson?

d. Did the parents seem confident or hesitant in working with materials?

e. Did the lesson seem too easy, too difficult, or about right for the child's ability?

f. Did the parents discuss the lesson with the child or move through it with little discussion?

g. To what extent was the parent active or passive during the lesson?

h. To what extent did the parents praise and/or criticize their child's efforts?

IV. Describe the general sequence of events during the lesson. Include any additional observations not covered above.

80.61

Attachment A-1
(Page 1 of 2)

FAMILY: _____ observation -- page 3

V. After the lesson is completed, tell the parent(s) you are interested in what they think of the program so far. Point out that their answers will be kept confidential. In the course of an informal conversation, try to find out their opinions on the following subjects.

(Note: to keep this as casual as possible, wait to record responses until you are out in the car)

a. How and why did they become involved in the program?

b. How often do they usually have a lesson during the week?

c. Do they review material between actual lessons?

d. Do they feel their child is on the right level (i.e., do they think the materials are too hard or too easy)?

e. Do they know who to call if they have any problems?

f. Would they be interested in additional lessons after they've finished these?

g. What things about the program do they especially like?

h. What things about the program would they change if they could?

Record any additional comments made by the parent(s) or child.

1980 Summer At-Home Reading Program

Appendix B

AT-HOME PARENT QUESTIONNAIRE

80.61
Instrument Description: At-Home Parent Questionnaire

Brief description of the instrument:

The questionnaire is a one-page form containing statements about various aspects of the At-Home Reading Program. Parents indicate the statements with which they agree by filling in the appropriate circles. The questionnaire is generated by computer and contains the child's name in several of the statements.

To whom was the instrument administered?

The questionnaire was mailed to the parents of those students who had been verified by the At-Home Office in Maryland as active participants.

How many times was the instrument administered?

Once. A reminder was sent to parents who had failed to respond to the first mailing.

When was the instrument administered?

The first mailing took place on July 23. The reminder was mailed on August 7.

Who administered the instrument?

Not applicable.

What training did the administrator have?

Not applicable.

Was the instrument administered under standardized conditions?

No.

Were there problems with the instrument or the administration that might affect the validity of the results?

Parents who returned the questionnaire may not be representative of the entire group, although the high return rate (71%) argues against this.

Who developed the instrument?

An evaluation intern, working under the supervision of the Title I and Title I Migrant evaluators.

What reliability and validity data are available for the instrument?

None.

Are there norm data available for interpreting the results?

No.

AT-HOME PARENT QUESTIONNAIRE

Purpose

The Parent Questionnaire was designed to provide data on several aspects of At-Home participation. This information served as a description, in very general terms, of how participating parents and children used the At-Home materials. In addition, the following evaluation question was explored:

> Evaluation Question 1-6: Was there any relationship between the way in which participating families used the program materials and subsequent achievement gains?

The Parent Questionnaire was also used to assess the parents' feelings about the program, and thereby provide information relevant to the following evaluation question:

> Evaluation Question 1-8: Did participating parents judge the program to be of any benefit?

Attachment B-1 displays the Parent Questionnaire.

Procedure

Using input from the project director and several Title I reading supervisors, as well as information gathered from the home observations (see Appendix A in this report), a list of potential questions was generated. From this initial list, the Title I evaluator, the Title I Migrant evaluator, and the At-Home evaluation intern selected those questions which appeared most important. Because keeping the questionnaire as short as possible was a high priority, questions reflecting similar program dimensions (e.g., AISD's administration of the program) were condensed into single items. Thus, parents could mark more than one response to most of the items.

Once the final format was determined, a computer generated the actual questionnaires. Each questionnaire contained the child's full name at the top, and the child's first name throughout the body of the questionnaire. Parents received one questionnaire for each of their children who participated in the program.

An accompanying letter (see Attachment B-1) was duplicated on AISD stationery. In keeping with the "personalized" style of the questionnaire itself, each cover letter was hand-signed in blue ink. The questionnaires, along with cover letters and stamped, self-addressed return envelopes, were mailed on July 23, 1980. Questionnaires were sent only to those families whose children had been verified as active participants by the At-Home headquarters in Maryland. One memo was mailed for each child in the program; therefore families with more than one participant received multiple questionnaires.

A reminder letter (see Attachment B-2) was prepared for those parents who had not responded to the initial mailing. This letter was sent on August 7. Of the 309 questionnaires sent, 218 were returned (a return rate of 71%).

Results

Responses to Multiple-Choice Items

Figures B-1 to B-11 display the number of respondents who endorsed the various response alternatives. As noted above, parents completed one questionnaire for each of their children who participated in the program. Therefore, "number of respondents" refers to the number of questionnaires received and not the number of families surveyed. The actual output (from Program FREQUENCIES of the SPSS package) is included as Attachment B-4.

Inspection of these figures reveals a large degree of consistency in parents' responses. For example, most were satisfied with the parent training and felt the lesson instructions were easy to understand. Most felt their children enjoyed the lessons and did not need a lot of help doing them. The mother was usually the child's principal helper, and most families completed lessons in one sitting. Only four of 218 respondents reported they had trouble getting help from District personnel when they needed it, and only 5% reported they had trouble getting corrected lessons back from Maryland.

It was initially hoped that the parent questionnaire would supply information relevant to the following evaluation question:

Evaluation Question 1-6: Was there any relationship between the way in which participating families used the program materials and subsequent achievement gains?

Unfortunately, the lack of variability in questionnaire responses meant that this question could not be meaningfully answered.

However, the relationship between certain questionnaire responses and both At-Home session level and grade level were analyzed. Figures B-12 to B-17 display the results of these analyses. Because the four Early Childhood participants were not included, the total sample size for these analyses is smaller than the sample in Figures B-1 to B-11. Inspection of the chi-square values reveals that parental understanding of lesson instructions (Figure B-12) and the expression of a desire for more lessons (Figure B-16) were both significantly related to At-Home session level. More specifically, levels A, B, and D seem to be harder for parents to understand than the other levels; levels A and D elicit fewer expressions of a desire for more lessons than the other levels. Grade level was not significantly related to questionnaire responses.

Responses to Open-Ended Item

The final item on the parent questionnaire invited respondents to "write any other comments about the At-Home program" on the back of the questionnaire. Of the 218 returned questionnaires, nearly half (102) had additional comments written on the back. These comments are listed (exactly as they appeared) in Attachment B-3. These responses are directly relevant to the following evaluation question:

Evaluation Question 1-8: Did participating parents judge the program to be of any benefit?

Inspection of these comments reveals the majority to be very positive. That is, most of the respondents indicated they enjoyed the program and many expressed a wish for its continuation in the future. Different parents tended to emphasize different aspects of the program as particularly important to them. For example, several stated they liked the opportunity to interact with their child and that the experience gave them a better appreciation of the child's strengths and weaknesses. Several thought the program was beneficial in terms of maintaining the child's academic skills during the summer vacation, and many noted that their children enjoyed working on the lessons.

However, parents' written comments were not uniformly positive. A few respondents thought the lessons were too easy for their child, while an equal number thought the lessons were too hard. Several parents wanted to see math lessons in addition to the reading lessons. Two parents said they were unable to get help when they needed it, and one wished that the lessons took longer than 15-20 minutes to complete. One parent was disappointed that her child received the same level the child worked on last summer. Three parents felt the program started too early and that it should not start before school ends. Four parents commented on problems they had communicating with program headquarters in Maryland (e.g., being told that only seven lessons were received when all ten had been sent).

In sum, most parents judged the program to be beneficial, although several had specific suggestions for improving it.

OFFICE OF RESEARCH AND EVALUATION

July 23, 1980

Dear At-Home Parent,

I hope you have enjoyed working with the At-Home Program this summer. I believe that parents who actively participate in such a program show an interest in education which is an important part of their children's success in school.

My job is to evaluate this summer's At-Home Program. I will help the At-Home staff decide what is good about the program, and also what parts could be improved. In order to do this, I need your help.

Please take a few minutes to answer the enclosed questionnaire. I know you probably filled out another one earlier which you mailed to Maryland. However, this questionnaire will be sent directly to me at the Office of Research and Evaluation. Your answers will not be seen by anyone except me. Of course, how you answer will not affect whether your child goes to the banquet or gets a T-shirt.

Since many families have more than one child participating in the program, I have given you one questionnaire for each child you have in the program this summer. You will find your child's name in the directions for the questionnaire.

Your answers are very important to me. Since you have worked with the program for several weeks, you know much more about it than I do. If you have any questions, please call me. My phone number is 458-1227. With your help, the At-Home Program will be even better in the years ahead.

Sincerely,

Dave Welsh

Dave Welsh, At-Home Intern

P.S. For your convenience, I have included a stamped, self-addressed envelope you can use to return the questionnaire.

6100 GUADALUPE, AUSTIN, TEXAS 78752 512 / 458-1227

AUSTIN INDEPENDENT SCHOOL DISTRICT
OFFICE OF RESEARCH AND EVALUATION

AT-HOME QUESTIONNAIRE

DIRECTIONS: READ EACH QUESTION CAREFULLY. YOU CAN MARK MORE THAN ONE ANSWER FOR EACH QUESTION. THESE QUESTIONS ARE ABOUT YOU AND PATRICK _____.

REMEMBER THAT YOU CAN MARK MORE THAN ONE ANSWER FOR EACH QUESTION.

1. THINK ABOUT THE LESSONS YOU AND PATRICK _____ WORKED ON THIS SUMMER. THEN READ THE STATEMENTS BELOW. IF YOU AGREE WITH A STATEMENT, FILL IN THE CIRCLE IN FRONT OF IT.

   - O I THINK THE INSTRUCTIONS WERE EASY TO UNDERSTAND.
   - O SOMETIMES THE INSTRUCTIONS WERE HARD TO UNDERSTAND.
   - O WE HAD PROBLEMS GETTING OUR CORRECTED LESSONS BACK FROM MARYLAND.
   - O I WISH THERE WERE MORE THAN TEN LESSONS.

2. THINK ABOUT THE WAY THE AT-HOME PROGRAM IS RUN BY THE AUSTIN SCHOOL DISTRICT. THEN READ THE STATEMENTS BELOW. IF YOU AGREE WITH A STATEMENT, FILL IN THE CIRCLE IN FRONT OF IT.

   - O I WAS SATISFIED WITH THE PARENT TRAINING.
   - O I WAS NOT STATISFIED WITH THE PARENT TRAINING.
   - O I DID NOT GET ANY PARENT TRAINING.
   - O I WAS ABLE TO GET HELP WHEN I NEEDED IT.
   - O I WAS NOT ABLE TO GET HELP WHEN I NEEDED IT.
   - O I WAS TOLD PATRICK _____ MIGHT BE HELD BACK IN SCHOOL IF WE DID NOT JOIN THE AT-HOME PROGRAM.

3. THINK ABOUT THE WAY YOU AND PATRICK _____ WORKED ON THE LESSONS THIS SUMMER. THEN READ THE STATEMENTS BELOW. IF A STATEMENT IS TRUE, FILL IN THE CIRCLE IN FRONT OF IT.

   - O WE USUALLY DID EACH LESSON IN ONE DAY.
   - O WE USUALLY WORKED ON ONE LESSON SEVERAL TIMES DURING THE WEEK.
   - O PATRICK _____ NEEDED A LOT OF HELP WITH THE LESSONS.
   - O PATRICK _____ DID NOT NEED A LOT OF HELP WITH THE LESSONS.
   - O PATRICK _____ LIKED DOING THE LESSONS.
   - O PATRICK _____ DID NOT LIKE DOING THE LESSONS.

4. WHO USUALLY HELPED PATRICK _____ WITH THE LESSONS?

   O FATHER O MOTHER O SISTER OR BROTHER O OTHER O NO ONE

5. HAS PATRICK _____ BEEN IN THE AT-HOME PROGRAM BEFORE?

   O YES O NO

ON THE BACK OF THIS QUESTIONNAIRE, PLEASE WRITE ANY OTHER COMMENTS ABOUT THE AT-HOME PROGRAM.

AUSTIN INDEPENDENT SCHOOL DISTRICT
OFFICE OF RESEARCH AND EVALUATION

August 7, 1980

A Reminder --

Dear At-Home Parent,

A few weeks ago I sent you a questionnaire about the At-Home Program. Because I have not yet received your reply, I am sending you this reminder letter and one questionnaire for each child you have in the program.

Your answers are very important to me. Because you have worked with the program all summer, you know much more about it than I do. Your answers will help me decide what is good about the program, and also what parts could be made better.

Please take a few minutes to fill out this questionnaire, and then return it in the stamped, self-addressed envelope. If you have any questions, call me at 458-1227. Remember that your answers will not be seen by anyone except me, and will not affect whether your child gets a T-shirt or goes to the banquet.

Sincerely,

Dave Welsh

Dave Welsh, Evaluation Intern

P.S. If you have already sent me your questionnaire, please ignore this letter.

Thanks for your help!

4100 GUADALUPE, AUSTIN, TEXAS 78752 512 / 458-1227

VERBATIM COMMENTS FROM AT-HOME PARENT QUESTIONNAIRE

The following written comments from parents were reproduced just as they were written so that their meaning and impact would not be unintentionally altered. Readers may judge for themselves the accuracy of the conclusions contained in the text of this appendix.

80.61

1. It is a nice program to have. I wish they keep them going.

2. I do think the At-Home Program is very helpful and effective; however, we feel to add more lessons would be a mistake. A child with learning difficulties needs periods of 'freedom' (summer vacation) from responsibilities and learning pressures just as children who learn easier do.

   In _____ particular case he enjoyed most of the At-Home Program and entered in to it with a great deal of enthusiasm, although I feel it would have been better if we could have waited until a week or two after school closed before beginning the extra work.

   I realize that children with learning difficulties need extra help and must work harder but I feel that this should be handled with the least amount of pressure because in a child with learning difficulties pressure produces frustration.

   As a whole we gained a great deal from the program and would like to participate again and would reccommend it highly to others.

3. _____ enjoyed the lessons very much. She looked forward to doing them each week. And I think they will help her in the coming year.

   Thank you for giving me more of a chance to help our daughter at home.

4. She enjoyed it and thought it was easy.

5. I enjoyed working with ____ in the "At-Home Program." I think this helped him to keep up his skills. However I feel the program should be started the week after ____ was out of school and lasted every week during the summer. The lessons were rather easy for ____ and only took about 30 minutes.

   I'm glad to see the schools trying to coordinate a program with the parents. I feel that the children will be closer to their parents and in turn the parents will know a little bit about the learning habits of their child.

   Thanks for allowing ____ and I to take part in this "At-Home Program." I hope the program continues next year.

6. They love the lessons and wanted to do all of them at one time. Hope you have them next summer.

7. I was only disappointed when a couple of times _____ and I had trouble understanding some of the "extra" work he was sent. I didn't think there was sufficient instructions for that work. When I wrote a note to the instructor in Maryland about the problems that we did not understand -- we never heard from her about it. Otherwise, I think _____ and I really benefitted from this program and wish we continue it next year.

80.61

8. My child and I enjoyed working in this program. _____ has been in the program for 3 years and she looks forward to it every summer. My younger daughter _____ says she would also like to take part in the program. I hope the at home program continues to be a suscess. And lasts for many more years. I'm looking forward to our secession.

9. I think the at-home-program is great. I enjoyed it very much and so did _____. I only wished that my son could have taken this lesson this summer. He likes working with the lesson too. He had it year before last but not this year. I really do think that these lesson really helps. So keep up the good work.

10. We had a lot of fun with the lessons, and _____. We feel we could do more lessons and will be interested in more At home programs. The only proplems we had were gitting the lessons mailed on time (we had a very busy summer). Thank you Mr. Welsh, and we hope to do more programs in the future.

11. Both _____ and I enjoyed the program very much, beacuse I could spend time helping her, and she was very happy when she got the lessons back. if I would had known about this program before I would have enroll her last year. I hope that they will continue this program again.

12. _____ will be going to Brentwood again next year and I have learned that Brentwood will not be in the At-Home Program next year. I am really disappointed. _____ thoroughly enjoyed the lessons & looked forward to doing them each week. There was one lesson - #5 that gave _____ a great deal of trouble. I felt it was much too hard for him. None of the other lessons gave him much trouble at all. I do wish _____ could be in this program next year.

13. _____ enjoyed the first two lessons. After that he did not like the program because he didn't want to take the time to read and answer the questions. Otherwise, I think this is a helpful program for the kids.

14. I think it was very interested for her and me because I learned a lot from it also. Hope this program will continue not only for during the summer, but also for school time.

15. i injoy the at home Program this summer _____ injoy to very murch Thank to the at home Program.

16. I felt the program was fine, and could have been a little bit harder with more reading stories in it. The math part was a surprize, although it was great it realy help _____ a lot more.

17. Good project to get parents involved with working with their children on school work. Shows child that parent thinks school work is important.

18. _____ and the family went on vacation three weeks ago. She did not resume the program when we returned. So, she did not complete the At-Home Program.

19. I think _____ learned a lot of new words or the meanings of simple everyday words that i Thought she knew. I am very pleased because _____ is ONE of my girls who really needed this kind of program. She was very slow in school two years ago, but now she did very well at Pleasant Hill in 79-80.

20. I would like to say is that I enjoyed this program very much. I wish they have this program again.

21. For the most part it was a good experience working together. I learned _____ strengths and weaknesses -- and sometimes it was frustrating for both of us.

    The only suggestion for improving the program would be to start it later in the summer (rather than in May while school is still going on) and have it continue further into the summer -- hopefully up to August. This way we were still getting through school in May, having extra lessons, and now it's the middle of July and the summer program is over. It would be beneficial, I think, to have a continuum built so that when school starts, the 'rustiness' is not there. I'm sure this is a major objective of the At-Home Program, but the timing seems to negate, at least in part, this objective.

    The rewards, though, of the banquet and T-shirt have been a real incentive for ____. He's been working on the lessons for his own sake, but knowing there's a reward at the end has really helped.

22. This program helped _____ keep up the study habits he had already learned in first grade and I feel he's that much more prepared to start 2nd grade. It could have been longer & he _____ could have handled more difficult work.

    Thank you for the program. Please continue it.

23. _____ enjoy the program very much and she really looked forward to doing each lesson, in fact, some weeks she wanted to do two lesson at a time. The only trouble she had was toward the end of the program she had a little trouble understanding the test and it cause her to make more mistakes.

24. _____ has enjoyed this program and looks forward to getting his tests back in the mail. The only lesson he had any trouble with at all was Assignment 7A--upper and lower case letters. We worked on it a little longer than the rest and I will be reviewing him on that before next school year.

    I'm pleased with this program.

25. I, _____, mother of _____, really enjoyed the At-Home Program. I enjoyed working with my daughter very much. The program even helped me a little, it was fun and educational. I found out my daughter knew more than I expected. We hope the program continues.

26. _____ is only six I have to read the instructions and explain the questions.

I like these At-Home lession they are working well with my two four (4) year old twin daughter which will be five (5) August 22, and will be intering Norman this school year. They also enjoy the lessions.

27. Both of my girl's enjoyed the program but they would finish their lesson in one hour & then they were anxious to do another lesson. They felt one lesson a week was too little. They didn't like waiting so long for another one. this is the only complaint they had.

28. We enjoy the program. It help me with _____ . he is a bright child I can help him now.

29. Seems like the first two lessons were returned immediately and then took awhile for the others to come back.

30. It would be good if we could have a program during the school year. _____ is weak in Math so the lessons she received on Math were a great help. Sometimes the instructions to the Math was confusing. We both enjoyed the experience and would like to see it continued.

P.S. We would like for _____ to continue in the program so that we can help her with her weakness. I try to help her with reading and her dad helps some with Math. We also work with the teacher during the year to keep up with her progress.

31. This program seems like a great idea for the children who have a hard time learning their reading lessons in school. It would be a shame if they had to lose all they had gained just because of summer break.

_____seems to have been put in a little higher level than he had been in at school. Instead of repeating the same things he had already learned in the school year, he was learning new things toward the end of the program. This didn't create a problem (if it had I would've gotten in touch with the representative here). The only problem was my lack of ability to explain the instructions to him. After going over them a few times, we both "saw the light" and were off and running.

Thank you for your program.

32. The program can really help the childred learn. The only problem I had with _____ was finding the right time for her to do the lesson. Because sometimes she was to busy playing and didn't feel like working out her lesson. I think that in the morning was the good time for her to work her lesson.

33. 1. In _____ case I wish there were more than 10 lessons (if done in summer) as she needs the extra help.
    2. We never needed help, so I can't say for sure, but I imagine it would have been there.
    3. _____ liked the lessons fine, and got through them quickly. It was the rhymes she had trouble with.

34. _____ had to be told to do the lessons, beacuse when she would receive the corrections she would put the letter in the folder and sometimes wouldn't tell me that the corrections had come during the week, so I would put her right to do the lessons.

35. Lesson with vowel/syllables Instruction with clap hands and mark X on paper was OK. When page four had this same note plus nod head and mark circle word, _____ would get confused with short attention spand.

Did not get Lesson Seven back. Lost in mail.

Had a person to contact in case we needed help.

The beginning lessons were not as hard for_____. More time had to be spend on each lesson as we progressed. When we finished the Tenth lesson, _____was disappointed there were no more lessons to do.

I enjoyed working with _____. It gave me an idea of the possible problems which might be occuring or where additional help is needed. Thank you for letting us participate.

36. It's a pretty good program and we enjoyed it. Thank you.

37. It's a very good Program.

38. Some of the lesson was so simple_____ wanted more to do. The extra lesson that they sent wasn't that interesting.

39. I would have liked more extra work.

40. The only comment I like to make is that this is a wonderful program for both the child and the parents, it also helps the parents find out what his child needs to work on a little bit more on.

41. _____tries very hard. She dose most of lesson on her own.

She is a hard worker. But_____ just dosent pay attention or read directions very well. This causes_____ to ask question. She is a very slow learner. But she tries very hard. Reading I'snt one of her favorite hobbies.

_____is very good at understanding. With a little help. She also likes to read.

____ dose good work. She catches on very quickly. She likes to read.

_____ is doing fine with the At Homeprogram She just needs someone to explain it to her. She dose the rest.

42. I like the at-Home program.

43. I think that all parents could join the at-home program and that they would really enjoy working with their children. Also it will help them remember some of the things that they have learned in school. So that they will not forget what they learn in school.

44. Was satisfied with the program.

45. _____ and I enjoyed working together, I think this will be a great help to her going into fourth grade.

46. _____ and I did like the at home program. _____ keeps asking me about the T-shirt. I think thats what he was really working for.

47. I had several questions about the program. I called the number given in the training program but my calls were not returned. I called several times.

48. We both enjoyed working together on the lessons. Sometimes, _____ could not understand the instructions, but when I repeated them to her, they were easier for her. I think the at-Home-Program is just wonderful. I know my child has kept up with her reading all summer by working with the program.

49. I liked the lessons. it was an experience, but I had trouble with them myself, and I just did not have that much time to it down with her and my other daughter since I have two other smaller children at home.

    Other than that the program seems very helpful.

50. I enjoyed helping or working with her when ever I had the chance but it was kind of hard to understand. It was kind of hard to find the time for the lessons I have four kids and its kind of hard to give one child your individual time.

    Other than that the program is very helpful.

51. I myself as a parent really in trully injoy working with my kids if time permit. But we both enjoyed it. And hope very much that the same program will be available to his baby brother and thank you again for the program.

52. We were pleased and happy to participate. The money part was the hardest for _____. The rest was fairly easy for her.

53. _____ didnt like the extry work. When he had to draw he didnt wont to do it, because he sead he couldnt draw that good. Most of the work had at the answer right their, but he would guess at the question. The program was great it improved his reading a great deal.

80.61

54. _____ sometimes dont understand her lessons. But alfre a while she come to a understanding But we haye to help our child. We are prout of _____ and ____. we let help our children with Home Program. hope lot of mother help. hope to keep up the good work. P.S. sometime I late because my husband is Ill.

(other child)
We injoying with together cause ____ love to read and I love to teach my son to read, I just love this 'home program,' my son and I have a understanding on the program. Let keep up the good work.

55. I think the at home program is ok and beside _____ like to study. But got behind on the program cause we when on vacation. Sometime I understand the work and I had trouble with it. Thank you.

56. _____and I liked the at home program very much. In the first few lessons she needed more help, toward the end she was able to work alone, asking only a few questions. With one exception the math. Anita had to get her sister's help with the math.

The at home program helps to keep the mind alert during the summer. Thanks.

57. This Program is a very good one for the children it keeps them interested in school. and it is even better when you make it a game at home when you get them to study.

58. We were pleased and happy to participate. The money part was the hardest for _____. The rest was fairly easy for her.

59. I think the at-Home program is a help to a child which is slow in school and need some extra attention. It help the parent understand the probobling the teachers has at school with her child. It help the child spend sometime with her parent which, helps she maynot get to do if this wasn't a part of her summer activitys.

60. The only real problem I has was remembering to send her homework on the same day each week. Otherwise than that every thing went alright. Thank you very much.

61. I would like to see more of at Home Programs for children, also the program could include some math & Spelling. This age child is just begining to learn math. These lessons have helped keep the child aware of what she learned in the school year.

62. I thank you should have some math such as they have in the grade level they are in, I find that Math & reading is usualy the weak point, in most of our young people today. Working with young adults in my line of work my waitress can't add or muply, to get the state tax on the guest checks.

63. I had a little trouble finding items that they needed and helping _____ be cerative in some areas, It was my fault that the lessons where not received to you on time.

80.61

64. (same parent as # 63)

_____ had trouble with some of the work (the math mostly). Sometimes I could not make her understand what I wanted her to do. It was my fault that the lessons where late to you. Also Alice was sick most of this summer.

65. _____ and I really enjoyed doing the Home Program. Joanna has really improve in her reading.

66. We are not finished with lessons because we were out of town for three weeks.

67. Will the program be extended? We have not completed it.

68. We really enjoyed helping Andrea work with the at home prog. We got to learn things out of it also. it was fun.

69. Sorry that I have taken so long in returning this. The At-Home-Program ask that we set aside 1 hour. It does not take _____ that long to do the lesson. I sometimes wish that they took a little longer than 15 to 20 minutes.

70. The lessons were pretty easy for _____ and I wish they had been a little more challenging. She did as many a week as I let her. so we had them finished before the mail in days'.

I feel with _____ that the lessons could have been alittle more challenging also. I was glad for the math sheets returned with the lessons.

71. _____ is very active in summer programs that he had to be remined of the lession. Maybe there where 1 or 2 instruction he did'n understand.

I like the At Home programs to have a little more math involve in it. It keep his mine open and he will not forget what he learn.

72. Thank you very much for the at-Home program, Ace learned a lot and hopfully he will be able to keep up in school this fall.

73. _____ and I really enjoyed doing the At-Home-Program. I hope it will be something we can look forward to every summer.

P.S. Sorry this is so late but we just arrived from vacation and it was in our stack of mail

74. I think 10 lessons were plenty, but I would like to have seen materials to extend the lessons. For eaxmple, in some exercises we circled the words that _____ could call correctly. However, there were no suggestions or supplemental activities for teaching the words she didn't know.

In other lessons _____ was asked to give a title to a story or summarize a main idea. She really was unable to do this without assistance. I would like to have had some suggestions on teaching her to do this without virtually just giving her the answers.

In general, the program was well written and simple to use.

80.61

75. _____ and I both enjoyed the program, we are usually working or doing some kind of lesson or something together with my grandson since all the other children have grownup, it was a nice experience but it wasn't new for us, because we usually include our children in all of our activities especially in the summer because we are all at home for the summer and we spend as mush time as we can just doing things together. We both enjoyed it.

76. It would be helpful to have a booklet besides the test paper.

77. I think the program is a very good idea (especially when school is out and these young children are still geared toward developing their minds). _____looked forward to working on these lessons and I could tell it was very self satisfying for him to show his mother how smart he was. He required very little help after explaining the questions and sometimes, knew what to do with practically no explanantion at all.

Unfortunately, some problems developed at home that interferred with _____finishing the lessons, but on the whole, I think it was very beneficial.

78. Last year _____ did really great on the at-Home-Lessons. It was my impression that each year (according to age and grade) that the program would be modified. So, he was given the same lessons as last year. If this is the case, I would strongly suggest that some changes be made. Otherwise, I find no other faults.

79. I enjoyed the At-Home Program. It let me know how_____ answer her questions in her school class and how she thinks about her work. I would like more Prog ms like this. The programs helps me to be able to study along with her and enjoy it. I was amazed at her understanding of her lessons.

80. My only regret was that I was having too many problems at home that I wasn't able to continue the lessons with my children. Perhaps I'll have a chance again another year in being able to help my children study.

81. The lessons were far too easy for_____. When the math sheet arrived_____ rebelled against the lessons entirely. She is and has been in the past over whelmed by the amount of math problems on an entire page.

_____ has continued working with a reading tutor from St. Edward's University through out the summer at a third grade level. Therefore I did not force this program on her since it was below the level she is successful in already.

The three lessons she did complete took maybe 5 minutes a piece and did not warrant my help in any way.

82. I think the At-Home Program is very good. Being summer, they are always doing this and that, going here and there. We might of done that was required of the program. But it was very good, He _____ liked doing it.

80.61

83. I sent in all ten lessons and was told that they had only received seven.

84. This summer I was away training for my job. I didn't have anyone to take the time with _____ and her lesson. She was with her grandparents and they are a little to old to help her with the lesson.

85. _____and I completed all ten lessons but did not get to send them in because I had to leave town due to illness in the family. So we did not get to send them all in by the deadline but I hope they will have it next summer she sure like it.

86. 1._____ does like to work with the at home program if he understand what he is suppose to do.

2. I think _____ fail the third grade last semester because lack of communication between him and his room teacher. Course I know with 30 students in one room, the teacher can't spent to much time with one student. But with plain English and a little pacious, _____can make the 3rd grade this year.

87. I wish there had been more math lessons.

88. By the end of July, _____ was beginning to become disinterested in taking time to do the lesson with so many other summer activities.

I feel the extra work sent at intervals wasn't necessary. After all, the children go to school for 9 months and don't want to spend most of the summer dealing with school work especially a six yr old. She hasenjoyed it & benefited a lot from enrichment and enlightment of course.

89. I enjoyed giving the lesson to ____, and _____ realy enjoyed doing on her own. _____ said the lesson were pretty esle--if yall have it again she'd like something little harded--something that she'll read and think more about it--before answering. this was a good ideal of At Home Program. I hope_____ will keep on, on the program. We both realy enjoyed. Sorry for not mailing this sooner.

90. In the beginning _____ was enjoying the lessons and later the lesson got a little complex and he seemed to stop enjoying them.

91. Both____ and I enjoy the program I learn lots from the lesson just much as ____did we love it Thank you much

92. _____ and I did not complete the program -- I was taking care of my father who was terminally ill.

93. _____ and I did not complete the lessons during the summer due to some family problems which occurred. The program is very good, but _____ did have difficulty understanding much of it, possibly it was too advanced for her. I don't remember her having come across much of it in her homework and it was difficult for me to explain clearly on her level, since I'm not a teacher, myself. I'm sure next year will be better for her since she has now been exposed to some of it.

80.61

94. Both _____ and I enjoyed working with the At Home Program. I think it should have been offered many years before. It's the ideal thing to keep the mine in function during the summer months.

95. _____ enjoyed very much doing his lesson. he was very pleased when his lessons came back to see what he had scored.

96. _____ was not able to finish the program. She went to spend ½ the summer with her grandmother and she cannot read. I was very pleased with the program (the few lessons we did together) Thank you for all your cooperation.

97. I feel that the child should have been able to send in more than one lesson a week. A working parent's schedule may not allow 1 lesson per week. Sometimes we had more time than others and would have been able to do more than one lesson and send it in. Otherwise I think the lessons were fine and I enjoyed doing them.

98. _____ lessons were slow in being returned. As a result of this factor _____ lost interest in the program.

I was not satisfied with parent training. I feel the kits should have been explained more fully. As a working mother I found I had no means of reaching anyone at the Ed. Office during the time I wanted to ask questions.

Perhaps this program may have been of benefit to some children-- _____ didn't appear to improve.

_____ was then placed in a one to one remedial reading class for the rest of the summer. There has been an improvement.

99. _____ will not go to Ridgetop next year. We have move to ----- she will go to Jane Landford. I don't know if they will have this program. I didn't know we were going to move

100. We really enjoyed working with the At HomeProgram I think that was very helpful for me and the children.

101. Although the lessons were very easy to . I found that if were not finished, it was due on me.

102. I think _____ enjoyed the work. It didn't last long, but it helps a lots.

1980 Summer At-Home Reading Program

Appendix C

AT-HOME STUDENT PROFILES

Instrument Description: At-Home Student Profiles

Brief description of the instrument:

A form used to record information about each participant's completed lessons, number of errors per lesson, date of lesson completion, etc.

To whom was the instrument administered?

Profiles were maintained for each At-Home participant.

How many times was the instrument administered?

As often as lessons were received by At-Home headquarters.

When was the instrument administered?

Student profile information was collected until August 8, 1980, (for students participating in the first 10-week session); and until October 22, 1980, (for students participating in the second 10-week session).

Where was the instrument administered?

At-Home headquarters in Baltimore, Maryland.

Who administered the instrument?

At-Home staff.

What training did the administrators have?

Administrators were all public school teachers. The nature of any specific training they may have been given is unknown.

Was the instrument administered under standardized conditions?

Not applicable.

Were there problems with the instrument or the administration that might affect the validity of the data?

Data were collected by program staff. However, there is no reason to believe that the information is inaccurate or incomplete.

Who developed the instrument?

At-Home headquarters in Baltimore, Maryland.

What reliability and validity data are available on the instrument?

Not applicable.

Are there norm data available for interpreting the results?

No.

AT-HOME STUDENT PROFILES

Purpose

Information contained in the student profiles was used to answer the following evaluation questions and information needs:

Evaluation Question 1-1: Were the objectives of the At-Home Program met?

Evaluation Question 1-2: Were the number of lessons completed and/or the percentage of items correct positively related to subsequent achievement gains?

Evaluation Question 1-3: Was the amount of extra work completed by participants positively related to subsequent achievement gains?

Evaluation Question 1-7: Were the session levels used by participants appropriately matched to their entering ability levels?

Information Need 1: How many students participated in the 1980 Summer At-Home Program by grade, sex, and ethnicity?

Information Need 3: Did the program meet its participation objective?

Procedure

Data Collection

As each participant's lessons were received by At-Home headquarters in Maryland, information about those lessons was recorded on the form reproduced in Attachment C-1. This form was developed by the At-Home staff, and includes spaces for information about the date the lesson (or "session") was received, the number of errors in the lesson, other materials which were returned along with the lesson, and materials which were sent back to the participant.

Each participant's profile was then sent to AISD's Office of Research and Evaluation, where the information was summarized and analyzed.

Data Analysis

Participation objective:

Simple summary statistics (frequencies, means, variances) were calculated in order to provide information relevant to these questions. Number of lessons completed and number of errors per lesson were summarized using Program CONDESCRIPTIVE of the SPSS package. Number of errors per completed lesson was calculated for each participant by dividing the total number of errors by the number of completed lessons. The results are presented in Attachment C-2.

Number of Lessons and Achievement Gains:

All participants who had both pre- and posttest ITBS scores were grouped according to number of lessons completed (0-2, 3-4, 5-6, 7-8, 9-10). In order to compare gains made by participants in these groups, analyses equivalent to the slopes and intercepts tests in the analysis of covariance were done using program REGRAN of the EDSTAT package. The three linear models used are described below.

$$\text{Model 1: } Y = a_0U + a_1X^{(1)} + a_2X^{(2)} + a_3X^{(3)} + a_4X^{(4)} + a_5X^{(5)} + a_6X^{(6)} + a_7X^{(7)} + a_8X^{(8)} + a_9X^{(9)} + a_{10}X^{(10)} + E$$

$$\text{Model 2: } Y = a_0U + a_{11}X^{(11)} + a_{12}X^{(6)} + a_{13}X^{(7)} + a_{14}X^{(8)} + a_{15}X^{(9)} + a_{16}X^{(10)} + E$$

$$\text{Model 3: } Y = a_0U + a_{17}X^{(11)} + E$$

The vectors used to define the models were as follows:

Y was posttest ITBS reading total grade equivalent.

U was the unit vector.

$X^{(1)}$ was pretest ITBS reading total grade equivalent if the student completed 1-2 lessons; 0, otherwise.

$X^{(2)}$ was pretest ITBS reading total grade equivalent if the student completed 3-4 lessons; 0, otherwise.

$X^{(3)}$ was pretest ITBS reading total grade equivalent if the student completed 5-6 lessons; 0, otherwise.

$X^{(4)}$ was pretest ITBS reading total grade equivalent if the student completed 7-8 lessons, 0, otherwise.

$X^{(5)}$ was pretest ITBS reading total grade equivalent if the student completed 9-10 lessons; 0, otherwise.

$X^{(6)}$ was 1 if the student completed 1-2 lessons; 0, otherwise.

$X^{(7)}$ was 1 if the student completed 3-4 lessons; 0, otherwise.

$X^{(8)}$ was 1 if the student completed 5-6 lessons; 0, otherwise.

$X^{(9)}$ was 1 if the student completed 7-8 lessons; 0, otherwise.

$X^{(10)}$ was 1 if the student completed 9-10 lessons, 0, otherwise.

$X^{(11)}$ was pretest ITBS reading total grade equivalent.

The output for these analyses is included in Attachments C-3 and C-4.

Appropriateness of Session Levels

The At-Home session level on which each participant worked was classified in one of three ways. The level was either "too hard," "toc easy," or "appropriate." This classification was derived as follows. Participants were first grouped by session level. Then their spring, 1980, ITBS reading total grade equivalents were examined. If the first digit of the grade equivalent corresponded to the designated difficulty level of the session level, the level was classified as "appropriate." If the first digit of the ITBS total reading grade equivalent (pretest) was higher than the session's difficulty level, the level was classified as "too easy." If the first digit of the grade equivalent was below the session's difficulty level, the session was classified as "too hard." The difficulty level of the various sessions was determined by the program's developers (see Attachment C-5). Level A was not included in these analyses because the bulk of the participants at this level were kindergarten students in the spring of 1980, and therefore had no ITBS scores.

Results

Figures C-1 and C-2 summarize the student profile information for the first ten-week session with respect to number of lessons completed and number of errors per completed lesson. Figure C-3 contains the same information for the second ten-week session. Inspection of Figures C-1 and C-2 suggests that participants at Levels X, Y, and Z made more errors than participants at the lower levels. Level Y, and Z participants completed fewer lessons than the other participants.

Evaluation Question 1-1 (also Information Need 3): Did the program meet its participation objective?

The participation objective was worded as follows:

> *On the average, participants in the Title I summer school At-Home program will complete 80% of the At-Home lessons.*

Inspection of Figure C-1 reveals that this objective was not met. On the average, participants in the regular 10-week At-Home program completed 77% of the At-Home lessons.

Evaluation Question 1-2: Were the number of lessons completed positively related to subsequent achievement gains?

Figure C-4 displays the results of the analysis comparing gains by number of lessons completed. Gains in ITBS reading total grade equivalent were not significantly different according to the number of lessons completed by participants. Thus, there appears to be no relationship between number of completed lessons and achievement gains.

Evaluation Question 1-3: Was the amount of extra work completed by participants positively related to subsequent achievement gains?

At the time the evaluation design was written, it was anticipated that the student profiles would contain information on the amount of extra work completed by participants. However, only information on the amount of extra work sent to participants was collected by At-Home headquarters. Since students were not required to complete and return the extra work they received, this question could not be answered.

Evaluation Question 1-7: Were the session levels used by participants appropriately matched to their entering ability levels?

Figure C-5 shows the number of participants whose session levels were appropriately and inappropriately matched to their entering ability levels. Level A/B has a very high proportion of students for whom this level is too easy, Levels X, Y, and Z have a high proportion of students for whom these levels are too hard. Thus, the answer to this question depends to some extent on the particular session level under consideration. The highest and lowest sessions are less appropriately matched to entering ability levels than the middle sessions. Overall, 144 participants were inappropriately matched; 107 were appropriately matched.

A relatively consistent picture emerges when these data are compared to the data on lessons completed (Figure C-1) and number of errors (Figure C-2). That is, participants at the upper session levels (X-Z) appear to be working on levels which are too difficult for them, making more errors, and completing fewer lessons. This information suggests that local personnel may need to examine more closely the way in which participants are assigned session levels.

Information Need 1: How many students participated in the 1980 summer At-Home Program by grade, sex, and ethnicity?

The list of students verfied by program headquarters as active At-Home participants was matched to the HEW file maintained by AISD in order to produce a listing by grade, sex, and ethnicity. This listing is shown in Figure C-6. There were 96 Black participants (44 males and 52 females); 139 Hispanic participants (57 males and 82 females); and 94 other ethnicities (52 males and 42 females).

The total number of students in this list (N = 333) is slightly larger than the number of students for whom student profile data were received (N = 307).

AT - HOME - PROGRAM

THE READING SEMINAR

OBJECTIVES AND SEQUENCING OF READING SKILLS

1980 Summer At-Home Reading Program

Appendix D

METROPOLITAN READINESS TESTS

Instrument Description: Metropolitan Readiness Tests.

Brief description of the instrument:

Eight tests that measure the skills needed in beginning reading and mathematics. These tests can be grouped into the following skills areas: auditory, visual, language, and quantitative. The Pre-Reading composite contains a total of 73 items.

To whom was the instrument administered?

All first-grade students.

How many times was the instrument administered?

Once.

When was the instrument administered?

September 8-12, 1980. Make-up tests were administered the following week.

Where was the instrument administered?

In the classroom.

Who administered the instrument?

The classroom teacher.

What training did the administrators have?

Written instructions from ORE were provided to the counselor and principal. Any teacher inservice training that occurred was the responsibility of the counselor or principal on each campus.

Was the instrument administered under standardized conditions?

Standardized instructions were distributed. Individual variations in administration procedures may have occurred.

Were there problems with the instrument or the administration that might affect the validity of the data?

No known problems.

Who developed the instrument?

The 1933 version was developed by Dr. Gertrude H. Hildreth; the 1976 version was written by Joanne R. Nurss and Mary E. McGauvran.

What reliability and validity data are available on the instrument?

Reliability and validity data are available in the Teacher's Manual, Part II on pp. 24-25. This includes Kuder-Richardson Formula 20 and a split-half correlation between scores on the MRT and the MAT and the Stanford Tests.

Are there norm data available for interpreting the results?

The standardizing sample of 18,002 for the fall, 1974 was chosen to represent a variety of geographic regions, community sizes, and socio-economic levels, from 17 school districts. More detailed information can be found on pp. 21-24 of the Teacher's Manual, part II.

METROPOLITAN READINESS TESTS

Purpose

Scores from the reading skills areas of the MRT were used as a posttest measure for At-Home participants who were in kindergarten during the 1979-80 school year. These scores provided information relevant to the following evaluation questions:

> Evaluation Question 1-1: Were the objectives of the At-Home Program met?
>
> Information Need 2: Did the program meet its achievement objective?

Procedure

Data Collection

The MRT was administered as part of the regular Systemwide Testing Program. A complete description of the procedures involved in this administration can be found in the Final Technical Report: Systemwide Evaluation (O.R.E. Publication No. 80.39). The pretest measure for all MRT analyses was the spring, 1980, administration of the Boehm Test of Basic Concepts. A complete description of the procedures involved in the administration of this test can be found in the Final Technical Report: Systemwide Evaluation (O.R.E. Publication No. 79.14).

A description of the procedures used for selecting control students can be found in Attachment D-1. Only matched pairs with both pre- and posttest scores were included in the analyses.

Data Analysis

The pretest-posttest gains of both program and control students were compared using raw scores. The following linear models were used:

Model 1: $Y = a_0U + a_1X^{(3)} + a_2X^{(4)} + a_3X^{(5)} + E$

Model 2: $Y = a_4U + a_5X^{(2)} + a_6X^{(5)} + E$

Model 3: $Y = a_7U + a_8X^{(2)} + E$

The vectors used to define the models are as follows:

Y is posttest raw score.

U is the unit vector.

$X^{(2)}$ is pretest raw score.

$X^{(3)}$ is pretest if the student was an At-Home participant; 0 otherwise.

$X^{(4)}$ is pretest if the student was a control; 0 otherwise.

$X^{(5)}$ is 1 if the student was an At-Home participant; 0 if control.

Models 1 and 2 were compared which gave a result which was the equivalent of the test for equal slopes in the analysis of covariance. Models 2 and 3 were then compared to test for equal gains. All analyses were done on the AISD computer using the EDSTAT statistical package. Program REGRAN was used for the comparisons of the linear models.

Results

Did the program meet its achievement objective?

Figure D-1 shows the results of the analysis. Inspection of this figure reveals that the achievement objective was not met at this grade level. That is, the At-Home students who were in kindergarten in 1979-80 did not make bigger achievement gains than their controls. Actual results are included as attachments to this appendix.

Measures	N	Mean Raw Score Pretest[a]	Mean Raw Score Posttest	Equal Slopes df	Equal Slopes F	Equal Slopes p	Equal Gains df	Equal Gains F	Equal Gains p
Auditory Skills									
At-Home	24	37.88	17.42	1,44	<1	.81	1,45	<1	.84
Control	24	38.50	17.42						
Visual Skills									
At-Home	24	37.88	15.83	1,44	1.07	.31	1,45	<1	.45
Control	24	38.50	17.46						
Language Arts Skills									
At-Home	24	37.88	10.67		[b]		1,45	<1	.35
Control	24	38.50	10.75						
Prereading Composite									
At-Home	24	37.88	44.46	1,44	<1	.73	1,45	<1	.92
Control	24	38.50	45.63						

[a] Pretest is total raw score on the Boehm Test of Basic Concepts (Spring, 1980, administration).
[b] The amount of variance accounted for by the two models was virtually identical. Therefore, this test could not be meaningfully evaluated.

Figure D-1. COMPARISON OF GAINS MADE BY AT-HOME AND CONTROL STUDENTS ON MRT MEASURES.

DOCUMENTATION FORM

Data Source: At-Home Participants (Summer, 1980)

File ID: A0Z

Date	Action Taken/Decisions	Initial
6-6-80	Match on school, grade, sex, ethnicity, achievement (i.e., ITBS Reading Tot.)	DW
"	Use grade equivalents for grades 1, 2; percentiles for grades 3, 4, 5	DW
"	If grade equivalents are not identical, hold other variables and take closest grade equivalent (must be within 4.0 months)	DW
"	If two grade equivalents are equally close, choose randomly	DW
"	If no grade equivalent match can be found within 4.0 months, change sex	DW
"	If the previous step does not produce a match, hold for discussion	DW
7-11-80	Follow above steps for grades 3-5	DW
"	Choose percentile matches which maintain the 4.0 month rule (this will vary from level to level — consult appropriate test manuals)	DW
7-18-80	For K students, use Boehm raw total scores	DW
"	Match within 3 points (adopt previous strategies)	DW
"	If no Boehm match can be found, change sex	DW
"	If this does not produce a match, hold for discussion	DW
8-14-80	If above steps do not produce a match, change ethnicity	DW

Comparison of Gains by At-Home Participants and Control Students.

Variable	Description
1	Fall, 1980, MRT subtest raw score (specific score varies from analysis to analysis).
2	Spring, 1980, Boehm total raw score.
3	Spring, 1980, Boehm total raw score if At-Home participant; 0, otherwise.
4	Spring, 1980, Boehm total raw score if control; 0, otherwise.
5	1 if At-Home participant; 0, if control.

1980 Summer At-Home Reading Program

Appendix E

IOWA TESTS OF BASIC SKILLS, 1978 EDITION, FORM 7

Instrument Description: Iowa Tests of Basic Skills, 1978 Edition, Form 7 (ITBS)

80.61

Brief description of the instrument:
Levels 7 and 8 were given to grades 1 and 2 respectively to measure skills in the areas of Word Analysis, Vocabulary, and Reading Comprehension. ITBS levels 9-12 were administered to grades 3-5 to measure skills in the areas of Vocabulary and Reading Comprehension. Students in grades 3-5 were given the same level as they were given for the spring, 1980 administration.

To whom was the instrument administered?

All the 1980 At-Home participants, and their matched controls.

How many times was the instrument administered?

Twice. Once as a pretest and again as a posttest.

When was the instrument administered?

The pretest was administered April 15, 16, and 17, 1980. The posttest was administered the week of October 6-10 and 13-17, 1980. All tests were administered in the morning.

Where was the instrument administered?

In the schools where the participants and their controls were enrolled.

Who administered the instrument?

Most of the tests were administered by classroom teachers or counselors. On six campuses posttests were administered by ORE personnel.

What training did the administrators have?

All examiners received written instructions from ORE, including a checklist of procedures and a copy of the test manual.

Was the instrument administered under standardized conditions?

Standardized instructions were distributed. Individual variations in administration procedures may have occurred.

Were there problems with the instrument or the administration that might affect the validity of the data?

No known problems.

Who developed the instrument?

The University of Iowa. The ITBS is published by the Riverside Publishing Company (Houghton Mifflin Company).

What reliability and validity data are available on the instrument?

Reliability and validity are discussed in the publisher's technical summary.

Are there norm data available for interpreting the results?

Norm data are available in the Teacher's Guide.

IOWA TESTS OF BASIC SKILLS

Purpose

The ITBS was used to provide information relevant to the following decision questions and information needs.

Evaluation Question 1-1: Were the objectives of the At-Home Program met?

Evaluation Question 1-2: Were the number of lessons completed positively related to subsequent achievement gains?

Evaluation Question 1-3: Was the amount of extra work completed by participants positively related to subsequent achievement gains?

Evaluation Question 1-4: Did students who participated in the program in previous years make larger average gains in reading achievement than students participating for the first time?

Evaluation Question 1-5: Did younger participants make larger average gains in reading achievement than older participants?

Evaluation Question 1-6: Was there any relationship between the way in which participating families used the program materials and subsequent achievement gains?

Evaluation Question 1-7: Were the session levels used by participants appropriately matched to their entering ability levels?

Information Need 2: Did the program meet its achievement objective?

In addition, ITBS data were used to compare the achievement gains of those students who participated in the second ten-week At-Home session to the gains of their matched controls.

Evaluation Questions 1-2 and 1-7 are discussed in Appendix C of this report. Evaluation Question 1-3 could not be answered due to reasons discussed in Appendix C. Evaluation Question 1-6 could not be answered because of the lack of variability in responses to the Parent Questionnaire (see Appendix B).

Procedure

Data Collection

The pretest measure for all the analyses described in this appendix was the spring, 1980 administration of the ITBS. A complete description of the procedures involved in this administration can be found in the Final Technical Report: Systemwide Evaluation (O.R.E. Publication No. 79.14).

The following procedures were used in administering the ITBS as a posttest measure.

During the summer of 1980, a control student was selected for each At-Home participant. A description of the procedures used for selecting control students can be found in Attachment E-1. In order to verify that the At-Home and control students were actually in attendance at the schools indicated by district records, a tentative list of students to be tested was sent to each of the involved schools. The memo accompanying this list is reproduced in Attachment E-2. After the corrected lists were returned, new control students were selected to replace those controls whom the schools indicated were not in attendance on their campus. If an At-Home student was not in attendance, the appropriate control student was removed from the list of students to be tested.

The final lists of students to be tested, along with test materials and instructions, were sent to the schools on September 29. The directions and tester checklist for ITBS Levels 7 and 8 are reproduced in Attachment E-3; the same materials for ITBS Levels 9-11 are reproduced in Attachment E-4. Note that each student was posttested with the same ITBS level as they received for the pretest. Preslugged answer sheets were used for Level 9-11.

In responding to the initial tentative lists of students to be tested, personnel at several of the schools indicated that they did not have the resources to administer the tests themselves. Therefore, it was decided to offer assistance with test administration to those non-Title I campuses without a counselor. The two memos accompanying the test materials (one for those schools to whom assistance was not offered and another for those to whom assistance was offered) are reproduced in Attachment E-2.

Testing was conducted during the week of October 6-10 by staff selected by the affected schools. Those tests which were administered by O.R.E. personnel (i.e., the evaluation intern and two doctoral students in educational psychology hired specifically for this purpose) were conducted during the weeks of October 6-10 and October 13-17. These tests were administered at Brentwood, Lee, Pecan Springs, Winn, Wooldridge, and Dawson. After completion of the testing, a thank-you memo (reproduced in Attachment E-2) was sent to each of the involved schools.

Data Analysis

ITBS Levels 9-11 were scanned directly from the preslugged answer sheets. However, Levels 7 and 8 had to first be transcribed onto coding sheets from which cards were punched. Only matched pairs of students with both pre- and posttest scores were included in the analyses. In addition, a few tests for certain students at Levels 7 and 8 were excluded from the analyses because visual inspection of the coding sheets indicated that these tests had either not been attempted, or had been improperly marked. At Level 7, five Reading, two Vocabulary, and two Word Analysis tests were excluded; at Level 8, one Reading test was excluded.

Comparing achievement gains of At-Home participants and controls:

In order to compare gains made by At-Home participants and their matched controls, analyses equivalent to the slopes and intercepts tests in the analysis of covariance were performed using Program REGRAN of the EDSTAT package. The following linear models were used:

Model 1: $Y = a_0U + a_1X^{(3)} + a_2X^{(4)} + a_3X^{(5)} + E$

Model 2: $Y = a_4U + a_5X^{(2)} + a_6X^{(5)} + E$

Model 3: $Y = a_7U + a_8X^{(2)} + E$

The vectors used to define the models were as follows:

Y is the posttest score.

U is the unit vector.

$X^{(2)}$ is pretest score.

$X^{(3)}$ is pretest if the student was an At-Home participant; 0, otherwise.

$X^{(4)}$ is pretest if the student was a control; 0, otherwise.

$X^{(5)}$ is 1 if the student was an At-Home participant; 0, otherwise.

Models 1 and 2 were compared which gave a result which was the equivalent of the test for equal slopes; models 2 and 3 were then compared to test for equal gains. Grade equivalent scores were used in the Word Analysis, Vocabulary, Reading Comprehension, and Reading Total analyses; raw scores were used for all the skills analyses. Actual results are included as Attachments E-5 through E-15.

In addition, a similar analysis was performed to compare the gains of the 20-week participants and their matched controls. The linear models used for this analysis were identical to those described above, the vectors used to define the models were as follows:

Y is the posttest reading total grade equivalent.

U is the unit vector.

$X^{(2)}$ is pretest reading total grade equivalent.

$X^{(3)}$ is pretest reading total grade equivalent if the student was a 20-week participant; 0, otherwise.

$X^{(4)}$ is pretest reading total grade equivalent if the student was a control; 0, otherwise.

$X^{(5)}$ is 1 if the student was a 20-week participant; 0, otherwise.

The actual results are included as Attachment E-16.

Previous At-Home participation and achievement gains:

In order to compare gains made by students participating in the program for the first time and those who participated in the program in previous years, analyses equivalent to the slopes and intercepts tests in the analysis of covariance were performed using Program REGRAN of the EDSTAT package. The following linear models were used:

$$\text{Model 1:} \quad Y = a_0U + a_1X^{(3)} + a_2X^{(4)} + a_3X^{(5)} + E$$

$$\text{Model 2:} \quad Y = a_4U + a_5X^{(2)} + a_6X^{(5)} + E$$

$$\text{Model 3:} \quad Y + a_7U + a_8X^{(2)} + E$$

The vectors used to define the models were as follows:

Y is the posttest reading total grade equivalent.

U is the unit vector.

$X^{(2)}$ is pretest reading total grade equivalent.

$X^{(3)}$ is pretest reading total grade equivalent if the student was a new participant; 0, otherwise.

$X^{(4)}$ is pretest reading total grade equivalent if the student was a repeating participant; 0, otherwise.

$X^{(5)}$ is 1 if the student was a repeating participant; 0, otherwise.

Students were identified as new or repeating participants on the basis of responses to item 5 on the Parent Questionnaire (see Appendix B in this report). Only students with both pre- and posttest scores were included in the analysis, which was conducted across grades. The actual results are included as Attachment E-17.

Participant age and achievement gains:

In order to determine whether younger participants made larger average gains than older participants, the mean grade equivalent gains for Reading Total (Grades 1-5) and Word Analysis (Grades 1, 2) were calculated. Only 10-week participants with both pre- and posttest scores were included in these calculations, the results of which are included in Attachments E-18 and E-19.

Students were then classified, by grade, as "high-gainers" (i.e., those whose gain score was above the mean gain score) or "low-gainers" (i.e., those whose gain score was below the mean gain score). Two chi-square analyses were then performed (one for Reading Total and one for Word Analysis) to test the significance of the relationship between grade level and the high-gain vs. low-gain dichotomy. Program CHICHI of the EDSTAT package was used for the analyses. The actual results are included in Attachments E-18 and E-19.

Results

Evaluation Question 1-1 (also Information Need 2): Did the program meet its achievement objective?

The achievement objective was worded as follows:

> *Participants in the Title I summer school At-Home Program will demonstrate a significantly greater increase in reading achievement than a matched group of nonparticipants from Title I eligible campuses where the At-Home summer program was carried out.*

Figures E-1 through E-3 shows the mean pre- and posttest grade equivalents for the Word Analysis, Vocabulary, and Reading Comprehension tests, broken down by grade and group (i.e., 10-week participant or control student). The significance of the mean gain for each group by grade has been evaluated by correlated t-tests. Inspection of Figures E-1 to E-3 reveals 13 of the 24 t-tests to be significant at the .05 level. Five of 13 significant gains are found in the At-Home group; eight are found in the control group. It's interesting to note the close simlarity of pre- and posttest scores for grades 1 and 2. This suggest that less stringent criteria may have been used in selecting first-grade participants than was the case for older participants, resulting in a relatively higher level of achievement among first-grade participants.

Figures E-4 through E-6 show the results of the tests for equal gains in Word Analysis, Vocabulary, and Reading Comprehension scores. Inspection of these figures reveals that, at the .05 level of significance, there is only one significant difference in the achievement gains of the At-Home participants compared to their controls. This difference is found in Reading Comprehension scores at the third grade (Figure E-6). However, this difference actually favors the control students, meaning that the control third graders achieved a larger average gain in reading comprehension than did the third-grade At-Home participants.

The overall test scores were then broken down into the specific skills measured by each test. Since the number of items measuring a given skill varied according to the ITBS level, these analyses were conducted by test level rather than grade level. Figures E-7 to E-11 show the results of the skill analyses. Inspection of these figures shows that only three of the 36 tests for equal gains were significant beyond the .05 level. In each case (Level 8: Verbs; Level 9: Modifiers and Connectors; Level 9: Facts), larger gains were achieved by the control students.

Finally, the Reading Total scores of the 20-week At-Home participants were compared to the scores of their matched controls. Figure E-12 displays the results of this analysis. There was no significant difference in the achievement gains of these two groups.

Altogether 101 slope and intercepts tests were conducted. Five of those were significant (1 slope test and 5 intercept tests), at the .05 level of significance.

The number of significant findings exactly mirrors the results to be expected with samples from identical populations; i.e., five percent of the tests were significant at the .05 level. The results provide no evidence for any positive or negative impact of the At-Home Program on student achievement.

In summary, the achievement objective of the At-Home Program was not met. That is, At-Home participants did not demonstrate gains in reading achievement beyond those of their matched controls.

Evaluation Question 1-4: Did students who participated in the program in previous years make larger gains in reading achievement than students participating for the first time?

Figure E-13 displays the results of this analysis, which indicates that students who participated in the program in previous years did not make larger gains in reading achievement than students participating for the first time.

Evaluation Question 1-5: Did younger participants make larger average gains in reading achievement than older participants?

Figures E-14 and E-15 display the results of the chi-square analyses which tested the degree of relationship between the "high-gain" and "low-gain" classification and grade level. Figure E-14 shows the results for the Word Analysis scores; Figure E-15 shows the results for the Reading Total scores. In neither case was participant age (i.e., grade level) significantly related to the type of achievement gain they made.

DOCUMENTATION FORM

Data Source: At-Home Participants (Summer, 1980) File ID: AOZ

Date	Action Taken/Decisions	Initial
6-6-80	Match on school, grade, sex, ethnicity, achievement (i.e., ITBS Reading Tot.)	DW
"	Use grade equivalents for grades 1, 2; percentiles for grades 3, 4, 5	DW
"	If grade equivalents are not identical, hold other variables and take closest grade equivalent (must be within 4.0 months)	DW
"	If two grade equivalents are equally close, choose randomly	DW
"	If no grade equivalent match can be found within 4.0 months, change sex	DW
"	If the previous step does not produce a match, hold for discussion	DW
7-11-80	Follow above steps for grades 3-5	DW
"	Choose percentile matches which maintain the 4.0 month rule (this will vary from level to level — consult appropriate test manuals)	DW
7-18-80	For K students, use Boehm raw total scores	DW
"	Match within 3 points (adopt previous strategies)	DW
"	If no Boehm match can be found, change sex	DW
"	If this does not produce a match, hold for discussion	DW
8-14-80	If above steps do not produce a match, change ethnicity	DW

TO: Principals Addressed

FROM: David Welsh, Evaluation Intern DW

SUBJECT: Posttesting for Summer At-Home Program Evaluation

As part of the evaluation of the 1980 At-Home Reading Program, the participants and a matched control group will be tested with portions of the Iowa Tests of Basic Skills. This testing will require approximately 80 minutes, and will be conducted by staff you select for this purpose. Testing will be conducted during the week of October 6-10.

The attached page contains the tentative list of students to be tested on your campus. At the top of the page are directions for checking the accuracy of the list. Please return the corrected list to me at ORE by Friday, September 19. The final list of students to be tested, along with instructions and testing materials, will be sent to your school on September 29.

If you have any questions, feel free to call me or David Doss at 458-1228. Thanks for your assistance.

TO: Principal Addressed

FROM: David Welsh, Evaluation Intern DW

SUBJECT: Posttesting for 1980 Summer At-Home Reading Program

Attached to this memo is the final list of students to be tested in your school during the week of October 6-10. Next to each student's name and identification number is the ITBS level with which the student should be tested.

Also accompanying this memo are the test materials and instructions for each level of the ITBS. Note that Levels 7 and 8 are given orally, and therefore will require separate administrations. Levels 9, 10, and 11 may be given together in a single administration. Each administration will require approximately 90 minutes. Should you have any questions about the testing procedures, or if you need additional materials, call me or David Doss at 458-1228.

All test materials and answer books/sheets should be returned no later than October 17 via school mail to:

David Welsh
Office of Research and Evaluation
Administration Bldg., Box 79

Thank you for your assistance.

Since yours is a non-Title I campus, and our records indicate you do not have a counselor in your school, we can make arrangements to provide a tester should you need one. If you have the resources to do the testing yourself, I will send you the necessary materials and directions. At any rate, I will call on Wednesday, October 1 to discuss this further with you.

SUBJECT: Posttesting for Summer At-Home Reading Program

I would like to take this opportunity to thank you for your assistance with the posttesting phase of the At-Home Program evaluation. Your cooperation was essential for the success of the evaluation efforts, and I assure you that your help was not taken for granted.

No one likes to see instructional time lost to testing, but a certain amount of testing is necessary if we are to enhance the effectiveness and accountability of our educational programs. If you have any comments or questions about the evaluation, please feel free to call me or David Doss at 458-1228. I will send you a summary of the test results after they have been analyzed.

Thanks again for your help.

DIRECTIONS FOR ADMINISTERING THE ITBS
LEVELS 7 AND 8 (VOCABULARY, WORD ANALYSIS, and READING TESTS)

Today we are going to take part of the Iowa Tests of Basic Skills. It is important that you do your best on these tests. Otherwise, they will not really show how well you can read. We will use these scores to help make Austin's schools better.

It will take about an hour to finish these tests. We will take a short break when we are half through. Before we begin, I'd like to give you some hints for test-taking.

- The first and most important rule of test-taking is to listen carefully to all the directions and follow them exactly.
- I cannot answer questions about test exercises. But if you have any questions about the directions, raise your hand and wait for me to call on you.
- It is important for you to be quiet while we read the directions and when we are taking the tests. If you finish working early, you can check back over your answers just on the part we are taking. BUT PLEASE BE QUIET. If you are noisy, you might disturb classmates who are still working.
- On each of the test exercises, you are to mark the answer you think is best. You are not expected to know all of the answers, so don't guess about which answer is correct unless you know that one or two of the choices just aren't right.

Does anyone have any questions?

(Pause for questions)

I am going to pass out the test booklets now. Leave your booklet on your desk until I tell you what to do next.

(Pass out booklets)

These booklets will be scored by a computer. Because a computer will score them, you must be very careful in the way you treat your booklets and in the way you mark your answers. If you are not careful, the computer might not give you the correct score on your test. Some of the things you need to remember are:

- Don't fold your booklet. Leave it flat on your desk.
- Don't mark on your booklet except to mark your answers.
- Use a number 2 pencil to mark your answers.
- When you fill in the ovals to mark your answers, be sure that you make a heavy, dark mark that fills the oval, but doesn't go outside it. Don't waste time making very neat marks, just make very black marks.
- Mark only one answer for each question. If you change your mind about an answer, erase your first mark as completely as you can.

Are there any questions?

(Pause for questions)

(Now read directions for Test V: Vocabulary, in your ITBS Teacher's Guide. For Level 7, the directions begin on p. 12. For Level 8, the directions begin on p. 28. Continue through Test VA: Word Analysis.)

(After the students have completed Test WA, they may close their booklets and take a 5-minute break. After the break, students should return to the same seats and open their booklets. When everyone is ready, read the following)

Now we will take the last part of the test. Remember not to fold your test booklets. You should only mark one answer for each question. If you want to change an answer, erase it as completely as you can.

Are there any questions?

(Pause for questions)

(Now read the directions for Test R1:Pictures in your ITBS Teacher's Guide. Continue through Test R3: Stories).

Office of Research and Evaluation

TESTER CHECKLIST FOR ITBS LEVELS 7,8

Students in grades 2 and 3 should be given Levels 7 and 8, respectively. The tests to be administered on each level are Vocabulary, Word Analysis, and Reading.

BEFORE TESTING

_____ 1. READ THROUGH THIS CHECKLIST: This information provides an overview of what must be done.

_____ 2. READ THE TEST DIRECTIONS: Reading the test directions allows you to become familiar with this particular test and helps you discover questions concerning the test procedure before the actual testing session. You will need to read the accompanying "Directions for Administering the ITBS" as well as certain portions of the ITBS Teacher's Guide.

Thus, if you will be administering Level 7, carefully read pages 12-15 of the Teacher's Guide. If you will be administering Level 8, read pages 28-31. Note that you will be using the Basic Battery booklets, which means that you will be referring to the page numbers preceded by a square in the Teacher's Guide.

_____ 3. DETERMINE WHEN AND WHERE TESTS ARE TO BE ADMINISTERED: According to the manual, the administration of the tests should require approximately 83 minutes.

10 minutes for preliminary activities
14 minutes for the Vocabulary Test
20 minutes for the Word Analysis Test
a 5-minute break
34 minutes for the Reading Test

Note that the tests are untimed, and these figures are only approximate. The time and place of the testing is up to the discretion of the teacher and the principal.

_____ 4. COMPLETE THE IDENTIFYING INFORMATION ON THE TEST BOOKLETS: Using the list of students to be tested, fill in each student's name, school, grade level, and identification number on the cover of the test booklet.

_____ 5. CHECK YOUR MATERIALS: Make sure you have the following supplies:

an adequate number of test booklets
enough number 2 pencils
a copy of the ITBS Teacher's Guide for Levels 7 and 8
a copy of the "Directions for Administering the ITBS"
a list of students to be tested
a sign for your door reading "TESTING, DO NOT DISTURB"

_____ 6. ARRANGE FOR THE STUDENTS TO BE IN THE APPROPRIATE PLACE AT THE RIGHT TIME.

THE DAY OF TESTING

_____ 7. ARRIVE EARLY: Make sure you have enough desks and that they are as far apart as possible. Hang the "DO NOT DISTURB" sign on the door.

_____ 8. DISTRIBUTE BOOKLETS AND PENCILS: After the students have arrived, make sure each one is given the booklet with his/her name on it.

_____ 9. ADMINISTRATION: Administer the tests following the "Directions for Administering the ITBS". Keep the following points in mind:

- Be present in the room during all testing.
- You may repeat test directions of students do not understand what they are supposed to do, and if it is permitted on that test.
- DO NOT rephrase a test question or explain what a word in a test question means. Read items to students only where the test directions allow.
- Remember that Level 7 and Level 8 tests are untimed. Allow sufficient time for all but the slowest students to finish each exercise or test.
- Whenever possible, move quietly around the room to observe whether students are following directions correctly. Make sure students are marking their answers properly in the test booklet.
- On those tests where students work on their own:
  - tell students to quietly check back over their work on that test if they finish early.
  - remind students to go back and complete exercises that they left unanswered on that test.
- DO NOT let students flip ahead in the test booklet.

AFTER TESTING

_____ 10. Make sure you collect all the testing materials. Double-check to make sure each test booklet has the student's name, school, grade level, and identification number.

_____ 11. MAKE-UP TESTING: Arrangements should be made so that students absent on the day of testing can be tested. Make-up testing should be done in an area which is free from distractions. Someone must be present to read directions and monitor the student(s).

2

_____ 12. RETURN OF COMPLETED MATERIALS: All testing materials must be returned to ORE by October 17. Materials should be returned via school mail to:

David Welsh
Office of Research & Evaluation
Administration Building, Box 79

Do not retain test materials to complete make-up testing after October 17. Do whatever make-up testing you can, but have all materials returned to ORE by October 17.

DIRECTIONS FOR ADMINISTERING THE ITBS
LEVELS 9, 10, 11 (Reading and Vocabulary Tests)

Today we are going to take part of the Iowa Tests of Basic Skills. It is very important that you do your best on these tests. Otherwise, they will not really show how well you can read. We will use these scores to help make Austin's schools better.

It will take about an hour and a half to finish these tests. Before we begin, I'd like to remind you about some hints for test-taking:

- The first and most important rule of test-taking is to listen carefully to all the directions and follow them exactly.
- I cannot answer questions about specific test exercises. But if you have questions about the directions, raise your hand and wait for me to call on you.
- It is important for you to be quiet while we read the directions and when we are taking the test. If you finish early, check your answers on that part of the test only or erase any extra marks you might have made on your test booklet or answer sheet. BUT DO BE QUIET. If you are noisy you might disturb classmates who are still working on the test.
- You will be told when to begin and when to stop. You will not be told how much time is left, so it is a good idea to do the exercises which are easy for you first and then try the more difficult exercises. Remember you are not expected to know all the answers. If you don't know the answer to an exercise, do not guess unless you know that one or two of the choices are wrong.

Does anyone have any questions?

(pause for questions)

I will now pass out the test booklets and answer sheets. Place your closed test booklet on your desk and wait until I give further directions.

(pass out test booklets and answer sheets)

First let's look at your answer sheet. It will be scored by a computer. Any tears, holes, folds, bent edges, or extra marks may cause the computer to score your answer sheet incorrectly. You must be very careful with your answer sheet.

Remember that all your answers to the test exercises are to be marked on your answer sheet with a number 2 pencil. DON'T MARK IN YOUR TEST BOOKLET. When you mark your answers, remember that you must:

- MAKE A HEAVY MARK. The mark should fill the oval, but it should not go outside. Do not waste time making very neat marks. It is more important to make very black marks. Be sure to use a number 2 pencil.
- KEEP YOUR PLACE ON THE ANSWER SHEET. Make certain each time that your mark is placed in the row numbered the same as the exercise.

- MARK ONLY ONE MARK IN A ROW. If you change your mind about an answer, erase your first mark as completely as you can.

Does anyone have any questions about how to mark the answer sheet?

(pause for questions)

Your answer sheet already has your name on the front of it. Now turn your answer sheet over to the side that does not have your name printed on it and find the space for your name. Write your last name first, then your first name. Do not write your name anywhere else on the answer sheet.

When you have written your name turn your answer sheet back to the side with your name already printed on it.

(After the students have done this, begin reading the blue type in the ITBS Teacher's Guide, page 14, column 2, paragraph 6.

Continue up to Test 1: Language Skills. Administer only the Vocabulary and Reading Comprehension Tests.)

(Students may take a five-minute break between the Vocabulary and Reading Comprehension Tests)

AUSTIN INDEPENDENT SCHOOL DISTRICT
Office of Research and Evaluation

TESTER CHECKLIST FOR ITBS LEVELS 9-12

Students in grades 4, 5, and 6 will be given Levels 9, 10, 11, or 12. Check the student list to determine which ITBS levels will be given to which students. Note that Levels 9-12 can be administered together. The Reading and Vocabulary tests will be administered.

BEFORE TESTING

_____ 1. READ THROUGH THIS CHECKLIST: This information provides an overview of what must be done.

_____ 2. READ THE TEST DIRECTIONS: Reading the test directions allows you to become familiar with this particular test and helps you discover questions concerning the test procedure before the actual testing session. You will need to read the accompanying "Directions for Administering the ITBS" as well as certain portions of the ITBS Teacher's Guide (pages 14-16).

_____ 3. DETERMINE WHEN AND WHERE TESTS ARE TO BE ADMINISTERED: According to the manual, the administration of the tests should require approximately 77 minutes.

15 minutes for preliminary activities
15 minutes for the Vocabulary Test
a 5-minute break
42 minutes for the Reading Test

The time and place of the testing is up to the discretion of the teacher and the principal.

_____ 4. CHECK YOUR MATERIALS: Make sure you have the following supplies:

an adequate number of test booklets
enough number 2 pencils
a copy of the ITBS Teacher's Guide for Levels 9-14
a copy of the "Directions for Administering the ITBS"
a list of students to be tested
a sign for your door reading "TESTING, DO NOT DISTURB"
a stop watch or watch with a second hand

_____ 5. ARRANGE FOR THE STUDENTS TO BE IN THE APPROPRIATE PLACE AT THE RIGHT TIME.

THE DAY OF TESTING

_____ 6. ARRIVE EARLY: Make sure you have enough desks and that they are as far apart as possible. Hang the "DO NOT DISTURB" sign on the door.

_____ 7. DISTRIBUTE BOOKLETS, PENCILS, AND ANSWER SHEETS: After the students have arrived, make sure each one is given the answer sheet with his/her name on it.

1

_____ 8. ADMINISTRATION: Administer the tests following the "Directions for Administering the ITBS". Keep the following points in mind:

- Be present in the room during all testing.
- You may repeat test directions if students do not understand what they are supposed to do, and if it is permitted on that test.
- DO NOT rephrase a test question or explain what a word in a test question means. Read items to students only where the test directions allow.
- Remember that Levels 9-12 tests must be carefully timed. Do not allow students to begin early, or to work past the stopping time.
- Whenever possible, move quietly around the room to observe whether students are following directions correctly. Make sure students are marking their answers properly on their answer sheets.
- On those tests where students work on their own:
  - tell students to quietly check back over their work on that test if they finish early.
  - remind students to go back and complete exercises that they left unanswered on that test.
- DO NOT let students flip ahead in the test booklet.
- DO NOT USE paper clips or rubber bands on the answer sheets!

AFTER TESTING

_____ 9. Make sure you collect all the testing materials. Double-check to make sure each test booklet has the student's name, school, grade level, and identification number.

_____ 10. MAKE-UP TESTING: Arrangements should be made so that students absent on the day of testing can be tested. Make-up testing should be done in an area which is free from distractions. Someone must be present to read directions and monitor the student(s).

_____ 11. RETURN OF COMPLETED MATERIALS: All testing materials must be returned to ORE by October 17. Materials should be returned via school mail to:

David Welsh
Office of Research and Evaluation
Administration Building, Box 79

Do not retain test materials to complete make-up testing after October 17. Do whatever make-up testing you can, but have all materials returned to ORE by October 17.
